

STEVE & SANDY SCOTT
162 Kardella Street Stretton Old 4116

Having a large Zincalume metal roof, approximately 500 Square Metres in area, on our 5 bedroom two storey family home at Stretton; we were faced with an issue of heat control as the air conditioning system had ductwork within the roof/ceiling area.

We were disappointed when the installation of 4 wind driven ventilators, with eave vents, to reduce the extreme temperature between the roof and ceiling, was not sufficient to assist the ducted air conditioner overcome the hot Qld summer heat.

The thought of installing an even larger air conditioner to cope with the heat seemed to be the only solution. This meant a big installation cost and further increases to the already enormous running costs of the ducted air conditioner.

Then we researched Shieldcoat Thermobond HRC on the internet and despite some initial scepticism of the product benefits, we were impressed by the, independently tested, performance specification data. That day, we contacted Ace Super Roof for a quotation on applying the heat reflective paint coating to our roof.

Ace Super Roof arrived on time, measured the roof area, inspected the roof for any damage, explained the whole preparation/coating process and quoted the project instantaneously. We were so impressed that we contracted Ace Super Roof there and then with the task of painting our roof with the Thermobond HRC membrane.

A few days later and our metal roof had been water blasted clean, defects and repairs carried out and the new Thermobond HRC heat reflective coating applied. When the application of Thermobond HRC was applied, we noticed the coolness in the top floor of our home immediately.

From the initial contact with Ace Super Roof, through to the end of the project, we have been immensely impressed with the courteous, prompt and professional approach they have displayed in completing the job to our absolute satisfaction.

A big thank you, Shieldcoat Thermobond HRC for the solution to our ceiling cavity heat dilemma and making the roof look fantastic. I strongly recommend this investment to save cooling costs and improve the value of any home or building.

Our utmost gratitude, Ace Super Roof, you've really cooled the house down.

Regards,

Steve & Sandy Scott
