## Roofbond Mouldshield C

Heavy Duty Cleaner for roofs, concrete driveways and walls.

Product Information:    **MOULDSHIELD C**  
Multipurpose heavy duty cleaner.

**Mouldshield C** is recommended for cleaning industrial equipment, floors, walls and finds special application as a pressure washing detergent for cleaning surfaces such as concrete, brick, tiles, masonry, including terracotta and tile roofs where they are soiled by oil, grease, or fungal growth.

**Mouldshield C** contains water-soluble solvents combined with biodegradable detergents and water conditioners. **Mouldshield C** contains corrosion inhibitors and is safe to use on most surfaces when used at the recommended concentration. However care should be exercised and contact times should be kept short when cleaning soft metal such as aluminium.

**Mouldshield C** is a concentrated cleaning liquid that can be used to remove the bond breaker on formed concrete tilt slab walls before painting or rendering. It can also be used to clean, remove grease or oil and etch concrete before coating with driveway coatings such as Stencilshield, Concreshield or Floorshield. **Mouldshield C** is also used to clean roofs to remove mould and in particular remove it on Fibro roofs and terracotta roofs.

Application Method:    **MOULDSHIELD C**

Multipurpose heavy duty cleaner

### STEPS:

For cleaning floors, roofs and walls use at a dilution of 1 part **Mouldshield C** in 20-40 parts water. I.e. up to 50ml per litre of warm water.

To remove heavy soil and fungal growth use at a dilution of 1 part **Mouldshield C** to 5 parts water then soak until the deposit has softened, brush and rinse with clean water.

For industrial uses **Mouldshield C** should be first used at a dilution of 1 part Mouldshield C in 20 parts water. This concentration can be varied to suit the conditions.

Apply by broom or backpack pressure spray to surfaces. Improved results may be expected from longer contact times except on soft metals. Rinse thoroughly with fresh water after cleaning.

### Notes:

- Before using this product consult the product MSDS
- Please see Roofbond, Stencilshield, Concreshield or Floorshield for application details
